

ENVIRONMENTAL STATEMENT

KRION®
PORCELANOSA SOLID SURFACE

SYSTEMPOOL S.A, which belongs to PORCELANOSA GROUP, develops and manufactures solid surface products named KRION®. They are manufactured as per the requirements of standards ISO 9001 and ISO 14001. **KRION® is a state-of-the-art product that complies with all the standards and regulations that apply to solid surfaces.**

KRION® is also an eco-friendly material as it is 100% recyclable. All products manufactured with KRION® can be reprocessed and used again in its production cycle. This guarantees that KRION® meets the basic recycling and environmental care standards.

In this sense, SYSTEMPOOL S.A. has always shown interest in reducing the environmental impacts of the manufacturing process of the KRION® solid surface, commissioning AIDICO for carrying out the Life Cycle Assessment of this product.

Using the Life Cycle Assessment, the aspects and potential environmental impacts throughout the product's life cycle are assessed and quantified, from the extraction of the raw materials, the production, the use, and up to the final disposal of the waste. This way, we determine the carbon footprint, depending on the amount of greenhouse gases, measured in units of carbon dioxide.
